**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 01 March 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 and 22-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakurai (Pat No. 5,566,447; hereinafter '447). The '447 teaches a method and apparatus for picking up a component. The apparatus comprises *inter alia* a plurality of component holding members held by a plurality of component holding members. The apparatus also has a position detecting means and a Z- or vertically (height) servomotor. An axis controller or driver is used to control each of the position detecting means (Cf. Fig. 4). The '447 also teaches that encoders 63, 65 and 67 are coupled to drive motors to so as to provide an output signal indicative of the Z coordinate position of the respective nozzles 51, 53 and 55 (Cf. Col. 3). It would have been obvious to recognize components having different sizes even assuming that one gives patentable weight to language such as this in the claim. The '447 is expressly in teaching that the nozzles are independent of one another. Moreover the Z-axis servomotors and the position detecting means are independent of one another. It is within the skill of one of ordinary skill in this art to *inter alia* recognize the surfaces of the plurality of components which have different heights continuously.

Claims 14-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
